

Malleable cast fitting to EN 10241.

Crosses are also known as four-way fittings. They have one inlet and three outlets, or vice versa. All crosses generally have female BSP threads. Forged crosses are common in the fire water sprinkler industry. Typically, crosses are not used in process piping to transport fluid. Material available in black or galvanised.

Malleable cast sizes available

Grade	Size (mm)							
Black						50		
Galvanised	15	20	25	32	40	50	65	80
