

REDUCING SOCKET

Steam Fittings – EN10242.

Reducing sockets are used to adapt the bore size of pipes, thereby increasing the offering of diameters available. Both ends are female threaded. Reducing sockets are used to connect two different sizes of pipe, similar to a concentric reducer which is used to maintain a centreline of a pipe but is smaller in size.

Sizes available

Male diameter (MM)	8	10	15	20	25	32	40	50	65	80	100
Female diameter (MM)	6										
		8	8	8	8						
			10	10	10						
				15	15	15	15				
					20	20	20	20			
						25	25	25			
							32	32			
								40			
									50	50	50
											80
